Building Automation

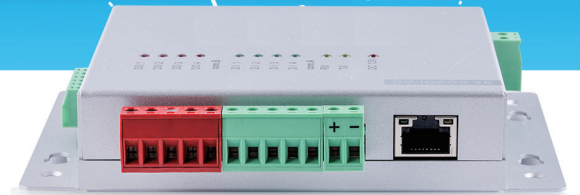

Provide emergency prevention and event record

Need to integrate multiple existing building application?

IP based hardware that can help you integrate with video surveillance .

It can receive output from 3rd party device to trigger different video surveillance functions.

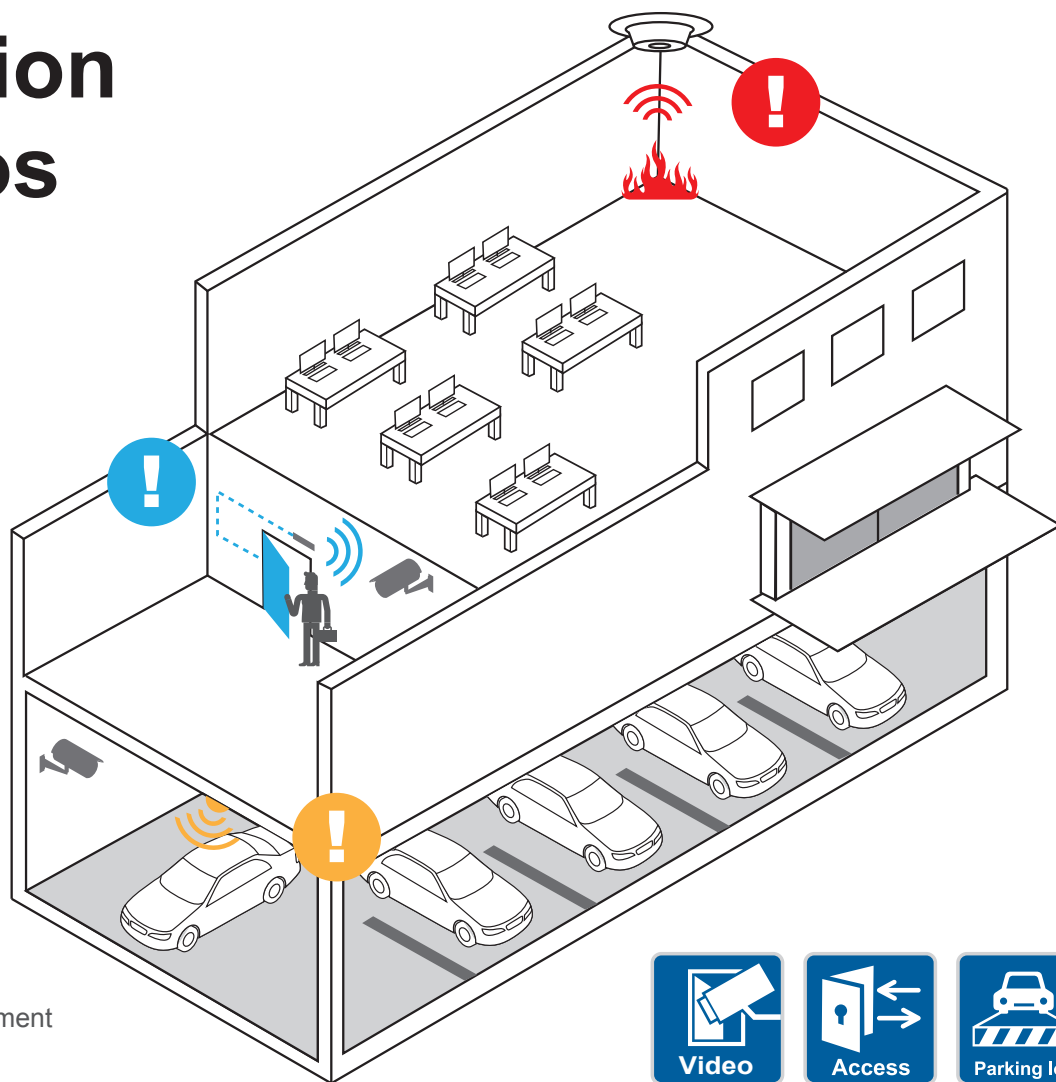

It can also allow GSS system to trigger existing building application hardware.

GSL
SOLUTIONS

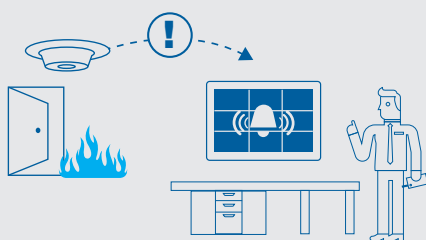

Application Scenarios

- Integrating with Smoke detector
- Integrating with Door Sensor
- Ultrasonic sensor for parking

Key Benefit

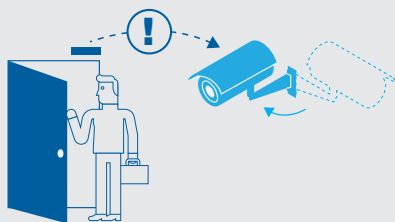

- Powerful software management
- Multipurpose integration
- Easy configuration
- Cost Efficiency, Energy Saving
- Alarms and security
- Central monitoring platform

Application 1:

Integrating with Smoke detector

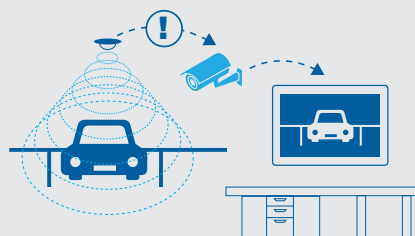

When smoke is detected, real-time alert can be triggered on GSS virtual map or GSS central monitoring platform.

Application 2:

Integrating with Door Sensor

Automatically start IP cam recording, when someone opens a door or window. The event can also be sent to GSS central monitoring platform in real-time.

Application 3:

Ultrasonic sensor for parking

When the stall is occupied, trigger video recording or take picture snapshot.

How It Works?
